I MKS TFT WIFI MODULE

MKS TFT WIFI is a WIFI module developed by Maker base R&D personnel based on ESP8266 chip. It can be used on MKS TFT24/MKS TFT28/MKS TFT32/MKS TFT35/MKS TFT70 touch screen. It has low price, small size and fast transmission speed. Transfer file printing, cloud service printing and other functions, suitable for printers with MKS touch screen.

1.2 Introduction to Print Mode

1. Cloud Print Mode: Recommended for use in a WiFi router environment with Internet access. Once you have a network connection to the WiFi module, the printer becomes the online printer on the cloud. Access to the app or control printer anywhere in the world. can also be in the local area network through the host computer (Printrun, etc.) to control the printer.
2. LAN Print Mode: Recommended in the case of a WiFi router, but the router is not available on the Internet or the network is slow (the cloud Print mode printer responds too slowly).
- 3 . AP printing mode: When the printer is in an environment where there is no WiFi router, the WiFi module is not configured, the WiFi module is configured, but the network environment is not good enough to connect to the router, the above three cases are entered by default. At this time the WiFi module will produce hot "mkswifi-xxxx" (open hotspot, no password), you can access the hotspot through the app, browser, host computer (Printrun, etc.) to control the printer.
- 4 . WebServer print mode: special mode, not recommended. This mode also controls the printer in the LAN. It can be controlled by the computer's Web, transfer files, print, etc. It can't use the APP control. You need to brush the Web version firmware to use it.

1.3 Cloud Print Mode

1 .Network Diagram

Features: Can control printers anywhere in the world by app.

.WiFi setting

The WiFi configuration options in the configuration file are shown in the following table:

Mks_config.txt	Description
#wifmodel(0:MKS WIFI TFT 1:MKS HLK-WIFI) >cfg_wifi_type:0	
#wifi mode(0:sta;1:ap) >CFG_WIFI_MODE 0	Set WiFi mode to STA mode
#wifi name >CFG_WIFI_AP_NAME MKSWIFI	Set the WiFi name to the name of the router you want to connect to
#wifi password >CFG_WIFI_KEY_CODE MAKERBASE	Set the WiFi password to the router password you want to connect to
#cloud service enable(0:disable 1:enable) >cfg_cloud_enable:1 #cloud server url >cfg_wifi_cloud_host:www.baizhongyun.cn #cloud server port >cfg_cloud_port:10086	The default settings can be

Attention : Our MKScloud APP only supports MKS WIFI and does not support HLK WIFI. Therefore, only the configuration of 0 in TFT configuration can use MKScloud APP control.

1.4 LAN printing

(1) Network Diagram

Features: Can control printer in LAN

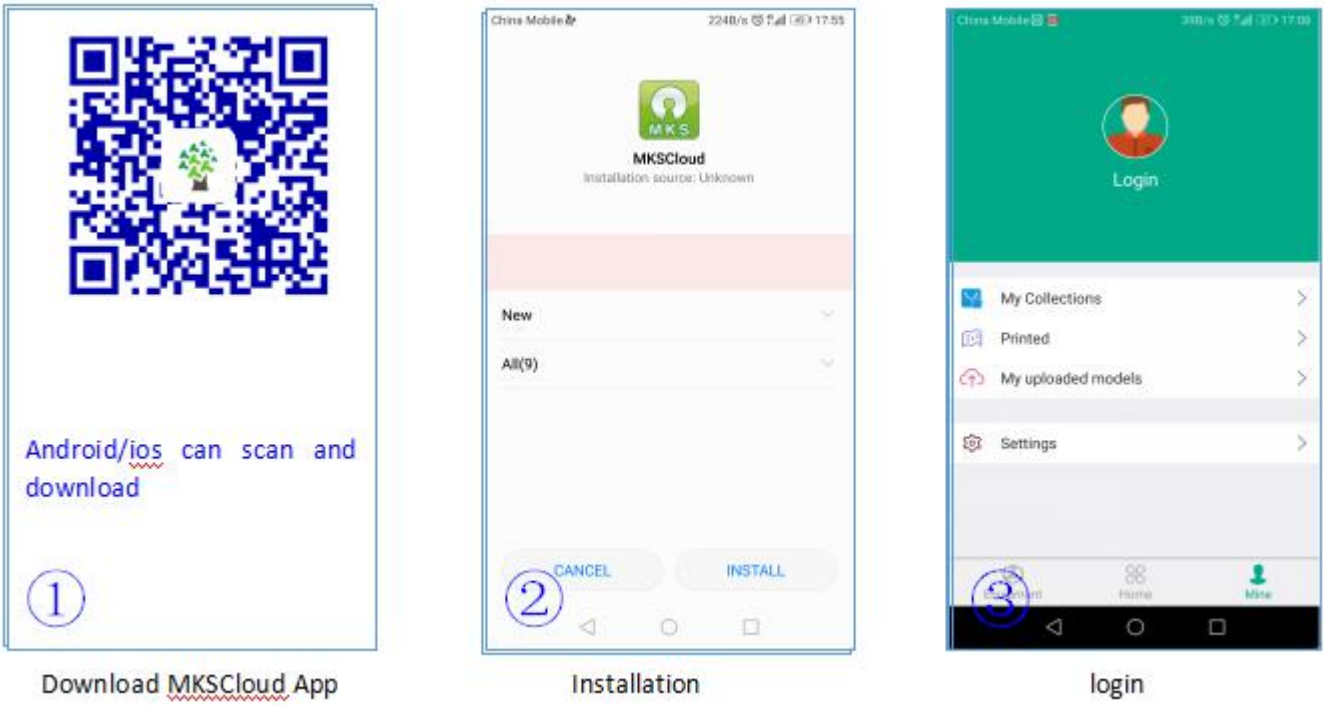

(2) WiFi setting

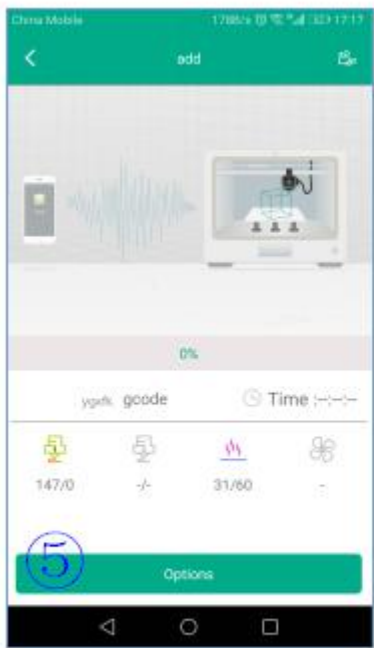

The WiFi configuration options in the configuration file are shown in the following table:

Mks_config.txt	Description
#wifimodel(0:MKS WIFI TFT 1:MKS HLK-WIFI) >cfg_wifi_type:0	
#wifi mode(0:sta;1:ap) >CFG_WIFI_MODE 0	Set WiFi mode to STA mode
#wifi name >CFG_WIFI_AP_NAME test	Set the WiFi name to the name of the router you want to connect to
#wifi password >CFG_WIFI_KEY_CODE 12345678	Set the WiFi password to the router password you want to connect to
#cloud service enable(0:disable 1:enable) >cfg_cloud_enable:1 #cloud server url >cfg_wifi_cloud_host:www.baizhongyun.cn #cloud server port >cfg_cloud_port:10086	It is recommended to disable the cloud services,when LAN control. Other parameters can be used by default.

Attention : Our MKScloud APP only supports MKS WIFI and does not support HLK WIFI. Therefore, only the configuration of 0 in TFT configuration can use MKScloud APP control.

II MKS Robin WIFI module

MKS Robin WIFI is a WIFI module developed by maker base R&D personnel based on ESP8266 chip. MKS Robin WIFI can only be used on MKS Robin series motherboards. It has cheap price, small size, fast transmission speed, mobile phone transmission file printing, cloud service printing. Etc.
